## Management's Discussion of Fund Performance

Over the trailing one-year period, the Pacific Capital Tax-Free Short Intermediate Securities Fund returned 2.58% (gross of fees). This performance lagged the 3.42% return of the Bloomberg Hawaii 3-Year Municipal Bond Index during the same period. The market has remained volatile within a trading range of approximately 100 basis points ("bps"). Several key events have triggered the rates outlook for the market. First, there was a 100 bps cut in the Federal Reserve Funds rate in the third and fourth quarter of 2024. Second, the Presidential election ushered in a new Trump administration which got to work quickly altering legacy policies. Both are a source of uncertainty for the market to digest, leading to market volatility.

For the trailing one-year period performance attribution.

- Security selection contributed outperformance for annual period.
- Longer maturity overweight provided a negative tailwind.
- Underperformance is attributable to higher quality bias of Hawaii based credit.

## Portfolio Holdings Summary Table (as of April 30, 2025)

The following table presents a summary by credit quality of the portfolio holdings of the Fund, as a percentage of net assets:

CREDIT QUALITY	
Pre-refunded/Escrowed to Maturity	5.0%
AAA	7.7%
AA	77.3%
A	7.6%
BAA	0.7%
BA	0.0%
Cash	1.7%

Credit quality ratings are primarily sourced from Moody's but in the event that Moody's has not assigned a rating, the Fund will use S&P or Fitch. If these ratings are in conflict, S&P will be used before Fitch. If none of the major rating agencies have assigned a rating, the Fund will assign a rating of NR (non-rated security). The ratings represent their (Moody's, S&P, and Fitch) opinions as to the quality of the underlying securities in the Fund, and not the Fund itself. The ratings range from AAA (extremely strong capacity to meet financial commitment) to D (in default). Ratings are relative and subjective and are not absolute standards of quality. A pre-refunded bond is secured by an escrow fund of U.S. government obligations (i.e., Treasury securities) and assumes the superior credit rating of the government obligation. The ratings do not predict performance and are subject to change.
